Fig. S1: (Haplotype) Linkage disequilibrium structure of 15 single nucleotide polymorphisms (SNPs) genotyped in the kynurenine 3-monooxygenase gene (*KMO*). Haplotype blocks structure is outlined, and D' (numbers (%), $D' = 100$ not printed) and R^2 (shadings) are given between each marker pair. The figure contains data that was obtained from a larger study conducted by our group that included the participants from the present study. The upper part of the figure shows controls ($n = 1473$), and the lower part shows patients with schizophrenia ($n = 837$).
